Seasonally Adjusted and Unadjusted Data

The Bureau of the Census, Department of Commerce, announced today that during July 1974, seasonally adjuated exporta, excluding Department of Defenae (DOD) Military Aasistance Program Grant-Aid shipments, amounted to $8,307.2 millioo[12] and that seasonally adjusted general imports for July amounted to $9,035.6 million.[12] Comparable seasonally adjusted totals for June were $8,356.7 million for exporta and $8,612.5 million for importa.

The Bureau, part of the Department's Social and Economic Statistica Administration (SESA), noted that based on the above seasonally adjusted figures, a merchandise trade deficit of $728.4 million[2] was recorded for July. For the first 7 months of 1974, a merchandiae trade deficit of $982.7 million waa recorded.

Seasonally adjuated imports on a c.i.f. (cost, inaurance, and freight) value basis for July amounted to $9,692.4 million.[123] The July merchandiae trade balance computed by subatituting the c.i.f. import value for the regular (Customs) import value and uaing the same export value, which is on a f.a.s. (free alongside ship) U.S. port-of-exportation basis, would result in a deficit of $1,385.2 million.[123]

On a seasonally adjusted basis July exports were $49.5 million below the record high export total recorded in June. However, seasonslly adjusted imports advanced to a new record high level, exceeding the June figure (the previous high) by $423.1 million. July also represents the first month that seasonally adjusted imports, on a Customs value basia, have reached the $9.0 billion mark and is the 8th conaecutive month that aeasonally adjusted imports have exceeded the comparable total for the previous month.

During the first 7 months of 1974, aeasonally adjusted exports were at an annual rate of $94,145 million, or about 33 percent higher than the calendar year 1973 total of $70,823 million. Seasonally adjusted imports (Customs value basis) for the same period, were at an annual rate of $95,830 million, or about 38 percent more than the calendar year 1973 total of $69,476 million. During the 4-month period, April-July 1974, seasonally adjusted exports averaged $8,131.9 million per month, a level about 11 percent above the $7,334.8 million average reported for the preceding 4-month period, December 1973-March 1974. General imports averaged $8,549.0 million for the current 4-month period, about 22 percent above the $6,999.0 million average recorded for the previous 4 months.

Seasonally adjusted and unadjusted export and import totals for aelected Schedule A and B commodity sections and divisions are shown in Table 4, "U.S. Exports of Domestic Merchandise--Schedule B Sections and Selected Divisions (f.a.a. value baaia);" Table 5A, "U.S. General Imports--Schedule A Sections (Customs value basis);" and Table 5B, "U.S. General Imports--Schedule A Sections (c.i.f. value basis)." Commodity components for exports exclude foreign merchandise, but include data on DOD Military Assistance Program Grant-Aid shipments.

Exports unadjusted for seasonal change and excluding Military Assiatance Program Grant-Aid shipments decreased from $8,327.5 million in June to $7,655.9 million in July. With Military Assistance Program Grant-Aid shipments included, July exports were valued at $7,695.7 million as compared to $8,384.4 million in June. Unadjusted general imports amounted to $9,003.1 million in July and $8,556.5 million in June.

[1] *Adjusted for seasonal and working-day variation, but not for price level. Factors used to adjust 1973 and 1974 data shown in this report represent seasonal adjustment factors derived from monthly data through 1973 and introduced in January 1974 combined with the appropriate working-day adjustment factors.*

[2] *Cumulations of data over at least 4-month periods are desirable to identify underlying trends. Month-to-month changes in exports, imports, and similar series often reflect primarily irregular movements, differences in monthly carryover, etc. Recent month-to-month percent changes in the overall seasonally adjusted export and import series are presented in the following table with average percent month-to-month rise and decline over longer periods shown for comparison. The average rise and decline figures exclude percentage changes for (1) the periods December 1968-March 1969 and July-December 1971 because of abnormalities in the data due to effects of dock strikes and (2) periods when negligible changes (zero percent) in the level of exports/imports occurred.*

Series	Month-to-month				Average monthly rates of change			
	June-July 1974 (Percent)	May-June 1974 (Percent)	Apr.-May 1974 (Percent)	Mar.-Apr. 1974 (Percent)	Average rise 1968-1973 (Percent)	Average decline 1968-1973 (Percent)	4 months Mar.-July 1974 (Percent)	12 months July 1973-July 1974 (Percent)
Exports.....	-0.6	+9.5	-7.3	+7.3	+3.9	-3.9	+2.2	+3.1
Imports.....	+4.9	+2.4	+3.3	+3.8	+3.8	-2.6	+3.6	+3.9

[3] *See the "Explanation of Statistics" section of this report for explanations of these export and import values and trade balances.*

Inquiries concerning these figures should be addressed to the Chief, Foreign Trade Division, Bureau of the Census, Washington, D.C. 20233. Tel: Area Code 301, 763-5140.

For sale by the Subscribers Services Section (Publications), Social and Economic Statistics Administration, Washington, D.C. 20233, or any U.S. Department of Commerce district offices. Price 10 cents per copy. Annual subscription (FT 900, 975, 985, and 986 combined) $3.00.

EXPLANATION OF STATISTICS

Import Statistics

General Imports/Imports for Consumption

The official U.S. import statistics are compiled by the Bureau of the Census from copies of the import entry and warehouse withdrawal forms which importers are required by law to file with Customs officials. The statistics are presented in terms of both "General Imports" and "Imports for Consumption." General imports are a combination of entries for immediate consumption and entries into Customs bonded warehouses and thus generally reflect total arrivals of merchandise. Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption and thus generally reflect the total of the commodities entered into U.S. consumption channels.

Import Valuation[1]

Customs Import Value

The value of imports as appraised by the U.S. Customs Service in accordance with the legal requirements of Sections 402 and 402a of the Tariff Act of 1930, as amended, is referred to as the Customs value. It may be based on the foreign market value, export value, constructed value, American selling price, etc. It generally represents a value in the foreign country, and therefore excludes U.S. import duties, freight, insurance, and other charges incurred in bringing the merchandise to the United States. This valuation is primarily used for collection of import duties and frequently does not reflect the actual transaction value.

CIF Import Value

The c.i.f. value represents the value of imports at the first port of entry in the United States. It is based on the purchase price and includes all freight, insurance, and other charges (excluding U.S. import duties) incurred in bringing the merchandise from the country of exportation and generally placing it alongside the carrier at the first port of entry in the United States. If the merchandise was acquired in a transaction between related parties, the purchase price used in deriving the c.i.f. value is based on an arm's-length equivalent transaction price, i.e., a price which would exist between unrelated buyers and sellers.

Import Monthly Carryover

It is the objective of the compiling procedures to include shipments, insofar as practicable, in the statistics for the actual month of importation. However, for purposes of the statistics the month of importation is based on the date of the import entry or warehouse withdrawal document. This may not in all cases correspond to the actual month of importation. (For example, under the Customs "immediate-delivery" procedures, importers may file the import entry up to 10 workdays after the actual date of importation.) Also, because of processing problems (e.g., late receipt of a document for an end-of-month shipment, rejection of a shipment by the computer because the data fail to meet certain edit criteria established to protect the accuracy of the statistics, etc.), there is an overall average carryover of about 7 percent (in terms of value) of the shipments from the reported month of importation (based on the date of the import entry or warehouse withdrawal document) to a subsequent month, usually the succeeding month. In addition, as a result of the aforementioned Customs "immediate-delivery" procedures, there is a further carryover of presently unknown magnitude from the actual month of importation to a subsequent month. These limitations should be borne in mind when making month-to-month comparisons.

Cumulations of data over at least 4-month periods are desirable to identify underlying trends. Month-to-month changes in imports, exports, and similar series often reflect primarily irregular movements, differences in monthly carryover, etc.

[1] Values have not been adjusted for changes in price level.

Export Statistics

Exports of Domestic/Foreign Merchandise

The official U.S. export statistics are compiled by the Bureau of the Census primarily from copies of Shipper's Export Declarations which are required to be filed with Customs officials, except for Department of Defense Military Assistance Program Grant-Aid shipments which are reported directly to the Bureau of the Census by the Department of Defense. The statistics are reported as exports of domestic or foreign merchandise. Exports of domestic merchandise include commodities which are grown, produced, or manufactured in the United States, and commodities of foreign origin which have been changed in the United States from the form in which they were imported, or which have been enhanced in value by further manufacture in the United States. Exports of foreign merchandise include commodities of foreign origin which have entered the United States as imports and which, at the time of exportation, are in substantially the same condition as when imported.

Export Valuation[1]

FAS Export Value

The value reported in the export statistics generally is equivalent to a f.a.s. (free alongside ship) value at the U.S. port of export, based on the transaction price, including inland freight, insurance and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation.

Export Monthly Carryover

It is the objective of the compiling procedures to include shipments, insofar as practicable, in the statistics for the actual month of exportation. For purposes of the statistics, the month of exportation is generally based on the date when the shipment leaves the United States. (For vessel or air shipments it is the date when the carrier departs or is

[1] Values have not been adjusted for changes in price level.

cleared from the port of export.) However, as indicated above for imports, because of processing problems (e.g., late receipt of a document for an end-of-month shipment, rejection of a shipment by the computer because the data fail to meet certain edit criteria established to protect the accuracy of the statistics, etc.), there is an overall average carryover of about 5 percent (in terms of value) of the shipments from the actual month of exportation to a subsequent month, usually the succeeding month. These limitations should be borne in mind when making month-to-month comparisons.

Cumulations of data over at least 4-month periods are desirable to identify underlying trends. Month-to-month changes in imports, exports, and similar series often reflect primarily irregular movements, differences in monthly carryover, etc.

Merchandise Trade Balances

Two trade balances are presented in this report:

1) The balance between exports based on f.a.s. values and imports based on Customs values.
2) The balance between exports based on f.a.s. values and imports based on c.i.f. values with adjustments for imports from affiliated sellers abroad to reflect arms-length equivalent prices.

Both balances are useful for certain purposes. The first balance is comparable to the U.S. trade balances published in the past, and permits comparisons with earlier data. The second balance is based on concepts similar to those used by most foreign countries, and therefore provides a reference for comparison with the trade balances published by those countries.

Neither of these balances corresponds to a measurement of the international payments or credit flows resulting from trade between the U.S. and foreign countries. In the first balance, exports are valued f.a.s. and reflect transactions prices, while imports are valued according to Customs legal requirements. In the second balance, imports include freight and insurance charges, even those paid to U.S. firms, while exports which are valued f.a.s. exclude freight and insurance charges even if they are earned by U.S. firms. Furthermore, imports from affiliated foreign sellers are revalued to arms-length prices, while no such adjustments are made for exports.

Effective with the statistics for January 1975, the balance using import data based on Customs valuation will be replaced by one calculated on a consistent basis with both exports and imports based on f.a.s. transactions values. At that time comparable data for 1974 will be available.

Revisions to the Statistics

Revisions are carried into the statistics on a periodic basis. Data for 1973 and 1974 appearing in the 1974 monthly issues of this report are presented as follows:

1974 Statistics

a. January through November 1974 issues: figures are as originally issued, except as noted below.
b. December 1974 issue: figures reflect revisions for prior months of the year issued with December 1974 statistics or earlier, as noted below.

1973 Statistics

a. January through May 1974 issues: figures reflect revisions issued with December 1973 statistics or earlier.
b. June through December 1974 issues: figures reflect revisions to 1973 data issued with June 1974 statistics or earlier.

In addition to the revisions which are made on a periodic basis, instances may occur where a significant error in the statistics for a month of the current year is discovered after the statistics for that month are compiled. If the error is of sufficient importance to require correction prior to the time that the regular revisions are carried, the correction is made and so noted in this report.

Sources of Further Information

Additional information regarding foreign trade statistics coverage, valuation, etc., is contained primarily in the following publications: Report FT 990, Highlights of U.S. Export and Import Trade; FT 135, U.S. Imports, General and Consumption, Schedule A Commodity by Country; FT 410, U.S. Exports, Schedule B Commodity by Country; and the Guide to Foreign Trade Statistics. Information regarding additional sources of statistics, the methodology used in seasonally adjusting the data, and other matters relating to foreign trade statistics may be obtained from the Bureau of the Census, Washington, D.C. 20233.

Table 1. U.S. Exports, General Imports, and Merchandise Trade Balance, Adjusted for Seasonal and Working-Day Variation, by Month

Part A. Exports (f.a.s. Value Basis) and General Imports (Customs Value Basis): January 1973 to July 1974

(In millions of dollars. See Explanation of Statistics for information on coverage and definitions of export and import values and trade balances. All data shown for 1973 and 1974 reflect seasonal adjustment factors introduced in January 1974)

Period and series	January-July	January	February	March	April	May	June	July	August	September	October	November	December

[1]Schedule B section and selected division descriptions are as follows:

0. Food and live animals
1. Beverages and tobacco
2. Crude materials, inedible, except fuels
3. Mineral fuels, lubricants, and related materials
4. Animal and vegetable oils and fats
5. Chemicals
6. Manufactured goods classified chiefly by material
7. Machinery and transport equipment
   - 71. Machinery, other than electric
   - 72. Electrical machinery, apparatus, and appliances
   - 73. Transport equipment
8. Miscellaneous manufactured articles, n.e.c.
9. Commodities and transactions not classified according to kind

[2]Seasonally adjusted figures for section 7 may differ slightly from the sum of divisions 71, 72, and 73 since each is independently adjusted.

[3]Adjusted for seasonal and working-day variation using seasonal adjustment factors introduced in January 1974. See footnote 1 on front page. Annual totals are not shown for seasonally adjusted data. Unadjusted data should be used for annual totals. The adjusted section totals in this table and similar overall monthly totals in tables 1 and 2 were adjusted independently.

[4]In the absence of demonstrable seasonal patterns for this section, no seasonal adjustment factors have been applied to data.

Table 5. U.S. General Imports Schedule A Sections, Seasonally Adjusted and Unadjusted by Month: January 1973 to July 1974

Part A. Customs Value Basis

(In millions of dollars. See Explanation of Statistics for information on coverage and a definition of Customs value. Unadjusted totals represent sum of unrounded figures and hence may vary slightly from sum of rounded amounts)

[1]Schedule A section descriptions are as follows:

0. Food and live animals
1. Beverages and tobacco
2. Crude materials, inedible, except fuels
3. Mineral fuels, lubricants, and related materials
4. Animal and vegetable oils and fats
5. Chemicals
6. Manufactured goods-classified chiefly by material
7. Machinery and transport equipment
8. Miscellaneous manufactured articles, n.e.s.
9. Commodities and transactions not classified according to kind

[2]Adjusted for seasonal and working-day variation using seasonal adjustment factors introduced in January 1974. See footnote 1 on front page. Annual totals are not shown for seasonally adjusted data. Unadjusted data should be used for annual totals. The adjusted section totals in this table and similar overall monthly totals in tables 1 and 3 were adjusted independently.

[3]In the absence of demonstrable seasonal patterns for this section, no seasonal adjustment factors have been applied.

Table 5. U.S. General Imports Schedule A Sections, Seasonally Adjusted and Unadjusted, by Month: January 1974 to July 1974

Part B. C. i. f. Value Basis

(In millions of dollars. See explanation of statistics for information on coverage and a definition of c.i.f. value. Unadjusted totals represent sum of unrounded figures and hence may vary slightly from sum of rounded amounts)

[1]Schedule A section descriptions are as follows:

0. Food and live animals
1. Beverages and tobacco
2. Crude materials, inedible, except fuels
3. Mineral fuels, lubricants, and related materials
4. Animal and vegetable oils and fats
5. Chemicals
6. Manufactured goods classified chiefly by material
7. Machinery and transport equipment
8. Miscellaneous manufactured articles, n.e.s.
9. Commodities and transactions not clasaified according to kind

[2]Adjusted for seasonal and working-day variation using seasonal adjustment factors introduced in January 1973. See footnote 1 on front page. Annual totals are not shown for seasonally adjusted data. Unadjusted data should be used for annual totals. The adjuated section totals in this table and similar overall monthly totals in tables 1 and 3 were adjusted independently.

[3]In the absence of demonstrable seasonal patterns for this section, no seasonal adjustment factors have been applied.
